

Innovations in Computer Guided Surgery

(Live Surgery Demonstration and Hands-on Training)

Presented by Michael Klein, DDS

Friday, November 14, 2008

About the Course

This course will allow you to bridge the gap between virtual implant dentistry and clinical implant dentistry leading to increased predictability of surgery, reduced procedure time and enhanced patient satisfaction. Attendees will understand how to virtual treatment plan cases and how to successfully apply the virtual treatment to the patient. 3D computer guided surgery continues to be widely accepted in the industry and this course will allow you to enhance your practice and improve the way you treat patients.

Dr. Klein is a Clinical Associate Professor at New York University in the Department of Implant Dentistry. Dr. Klein has achieved Diplomate status of the American Board of Oral Implantology/Implant Dentistry. He holds multiple patents in the field of computer guided surgery and is the Director of Advanced Implant Dentistry and Oral Restoration in Cedarhurst, New York, where he maintains a private practice limited to Prosthodontics and Oral Implantology.

Objectives
